

ABHINAV PANDEY

Bengaluru | +91 8799817029 | pandeysandeepl190@gmail.com | [LeetCode](#)

Summary

Full Stack Software Engineer with proven experience building scalable, production-ready web applications and enterprise platforms using React.js, Node.js, MongoDB, Express.js, Firebase, and Redux. Delivered high-impact features across AI-integrated systems, data-intensive dashboards, and KPI-driven analytics at Harman (IQVIA), with strong ownership of end-to-end development. Highly skilled in designing secure authentication flows, RESTful APIs, complex pagination, search and sorting logic, and responsive UI architectures. Recognized for hackathon-winning solutions, open-source contributions, and consistent delivery of clean, maintainable code in real-world environments.

Skills

- Full Stack Web Development (MERN Stack)
- Frontend Architecture & Component Design
- Backend API Development & Integration
- RESTful Services & CRUD Operations
- Authentication & Authorization (Firebase, JWT concepts)
- State Management using Redux
- Chrome Extension Development
- Cloud-Based Application Development
- AI Module Integration (Agentic AI)
- Data Visualization & KPI Dashboards
- Pagination, Search & Sorting Implementation
- Performance Optimization & UI Debugging
- Secure Application Design
- Scalable System Architecture
- Cross-Functional Collaboration
- Agile Development & Version Control (Git)

Experience

Software Engineer Harman Connected Services (Client: IQVIA)	12/2024 to Present India
• Architected and integrated Agentic AI-based modules for ROM estimation, capacity forecasting, testing workflows, and requirements management, enabling data-driven project planning and execution across 8+ active projects and cutting manual estimation turnaround time by ~20%. • Engineered scalable server-side pagination for 10+ enterprise-grade tables, efficiently handling large, complex datasets aggregated from multiple backend systems, with individual tables scaling to 5,000+ records and page load time reduced by ~30%. • Implemented month-over-month variance analysis logic, supporting accurate trend comparison across 15 KPIs between historical and upcoming monthly datasets for 10+ stakeholders. • Diagnosed and resolved 40+ UI, functional, and performance defects, cutting page load time by ~25% and resulting in a smoother, more reliable, and user-friendly application experience. • Designed and delivered KPI dashboards presenting six months of historical performance data, embedded within the Project Performance tab for comprehensive annual analysis, adopted by 50+ users across 6+ teams. • Developed an organization-wide announcement framework, enabling centralized, scalable communication across 12+ organizational units and 300+ users. • Built interactive, drill-down monthly data visualizations as part of a "Details on Demand" feature, improving data transparency and decision-making for 100+ daily active users. • Implemented advanced search and multi-column sorting capabilities across 15+ paginated tables, cutting average time-to-find-record by ~30%.	
Full Stack Developer Intern Krunk.AI	12/2023 to 02/2024 India
• Bootstrapped and structured a React.js application from the ground up, configuring React Router with fallback routes for seamless navigation and robust error handling across 10+ pages/routes. • Integrated Firebase services into the frontend, establishing a global authentication and authorization context across 8+ modules in the application. • Implemented complete user authentication workflows, including Sign-Up, Login, and email verification, ensuring secure user access. • Designed and developed dashboard interfaces from scratch, integrating real-time Firebase functionality across all modules. • Applied responsive design principles and reusable UI components to ensure a consistent and intuitive user experience.	
Chrome Extension Developer Intern ClickUp	11/2022 to 01/2023 India
• Developed "To-Doist for ClickUp," a Chrome extension using React and Babel, used by 50+ testers/users during pilot to manage tasks directly within the browser environment. • Implemented seamless management of workspaces, spaces, teams, folders, and tasks, eliminating the need to navigate to the ClickUp web platform.	

- Enabled full task lifecycle management (CRUD operations), improving productivity and task organization.
- Integrated workspace connectivity to ensure smooth task synchronization and real-time updates from the extension.

Data Structures & Algorithms (LeetCode)

- Actively practicing **Data Structures & Algorithms** using **LeetCode**, following a structured, topic-wise preparation approach.
- Covered core DSA topics including **Arrays, Strings, Linked Lists, Stacks, Queues, Hash Tables, Recursion, Trees, Binary Search Trees, Heaps, Graphs, and Dynamic Programming**.
- Strong focus on **problem-solving, algorithmic thinking, time and space complexity optimization**, and edge-case handling.
- Implementing solutions primarily in **JavaScript**, aligning with backend and full-stack development requirements.

Projects

InstaPM

- Contributed to a cloud-based project management platform, handling both frontend and backend development responsibilities.
- Delivered 7 successfully merged pull requests, enhancing platform functionality, performance, and stability.
- Implemented Redux for scalable and efficient state management across the frontend application.
- Integrated a chatbot feature to improve user engagement and platform support capabilities.
- Designed URL-driven routing aligned with UI tabs, improving navigation clarity and user experience.

Subs4Sale

- Designed and developed Subs4Sale, a freelancer-client marketplace platform similar to Fiverr using the MERN stack, completed within 1.4 weeks.
- Implemented essential marketplace features including secure authentication, real-time chat, transaction workflows, and ratings & reviews.
- Built frontend interfaces using React.js, backend REST APIs using Node.js and Express.js, and database architecture with MongoDB.
- Published and documented the project on GitHub, enabling code transparency and collaboration.

ShareVibe

- Built ShareVibe, a full-scale social media platform using the MERN stack.
- Implemented user authentication, social networking features, text and image posts, group management, and event reminders.
- Integrated Python-based voice denoising, Cloudinary for media storage, and Zeegocloud for real-time video calling.
- Architected a scalable backend to support high-traffic, media-intensive, and real-time communication features.

Accomplishments

Smart India Hackathon 2022 – Winner

- Developed an AICTE Grievance Management Portal enabling HEIs to submit authenticated grievances with supporting documentation.
- Implemented a time-bound automated grievance resolution workflow, ensuring accountability and transparency.
- Designed an appreciation and ranking system to recognize departments and individuals based on grievance resolution performance.
- Enabled two-way communication between HEIs and regulatory bodies for real-time grievance tracking and resolution, earning recognition as the winning solution among 200+ competing teams.

Tantrotsav Hackathon – First Runner-Up

- Developed a MERN stack-based social media application with secure authentication, text and image posting, and real-time messaging.
- Integrated Cloudinary for optimized media handling and Zeegocloud for video call functionality.
- Implemented robust backend security mechanisms to ensure secure and efficient data exchange.
- Designed a scalable backend architecture to support high user interaction and real-time communication.

Education

Bachelor of Engineering

Mumbai University

2024
